

Revolutionary product development
high-precision, quick & cost-effective production of parts and components

Our services:

Contract printing
Prototype manufacturing
3D modelling
Manufacturing of
products in series
Technology consulting
Design

Fields of application:

Car industry
Plastic industry
Casting
Tool design / Manufacturing
Health-care
Schools / Education
Visual design
Construction industry/ Interior decoration

Sales: László Kövér +36 70 932 7141
Ferenc Marján +36 20 951 8696

Revolutionary product development
high-precision, quick & cost-effective production of parts and components

Receive the part manufactured for you within 24 hours!

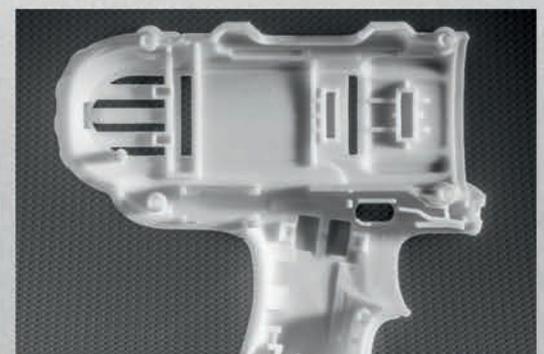

3D printer with industrial productivity is
at your service.

By melting the plastic powder layer by
layer, we build the ordered part. The so
manufactured object is strong, flexible,
and suitable for end use.

Thanks to the technology, it has large
dimensions of construction.

The printer can produce small parts and
large pieces as well.

The 0.1 mm layer thickness and the
dimensional accuracy are adapted to the
technologies used in modern
engineering.

**If you have any unique idea about the
products you need, please contact us!**
