Have Antibacterial Cleaning Experience Without the Need of Rinsing!

We touch many objects all day long. Our hands are full of harmful bacteria that are contaminated from the contacted surfaces throughout the day. **Omtox Antibacterial Cleansing Foam** challenges bacteria thanks to its special formula. It offers a quite practical and hygienic cleaning experience for daily use by providing effective protection against bacteria without the need of water, soap and towel.

Kills 99.99% of bacteria

Omtox Antibacterial Cleansing Foam has been developed in accordance with general use for hand, face and body cleaning. It is applied by contacting the area to be cleaned for 60 seconds by getting the required amount of product. Pump at least twice for hands and scrub hands thoroughly, including between the fingers, the inside of the nails, all the inner and outer surfaces of the hand. A sufficient amount of product is applied by massaging according to the area to be cleaned for the face and body. It helps prevent epidemic and infectious diseases by eliminating 99.99% of tested bacteria (*) and providing antibacterial activity.

* It has been proven that it provides antibacterial activity against the microorganisms specified according to the test results made in International Merieux NutriSciences laboratories approved by Republic of Turkey Ministry of Health: *Staphylococcus aureus*, *Pseudomonas aeruginosa*, *Escherichia coli*, *Enterococcus hirae*.

Hygiene Everywhere With Single Product, Touch Safely All Day!

BIOCIDAL

Your Health is in Your Hands! Why Is An Antibacterial Cleaning Important?

- ♥ Infectious diseases cause 60% of deaths worldwide.
Most infectious diseases are caused by hand contact with
- ♥ areas of disease-causing microbes or parasites.
Our hands are the organs which are most polluted in our daily life. According to a statement of Infectious Diseases Society of
- ♥ Turkey, there are between 2 thousand and 6 thousand bacteria per square centimeter of hands.

- ♥ The organisms causing the disease can be viruses, bacteria, rickettsia, fungi. Some of the bacterial infections are: Anthrax, Malta fever, tetanus, leprosy, tuberculosis, diphtheria, rotating fever, bacillus dysentery, pertussis, pneumonia, cachemia, meningitis, cutaneous leishmaniasis, erysipelas, plague, scarlet fever.
- ♥ It is known that if the bacteria in the hands are not purified with a healthy wash, they enter the body orally and cause many intestinal diseases such as jaundice, typhoid, cholera, as well as pneumonia, sinusitis and rheumatoid arthritis.
- ♥ Approximately 80-million food poisonings are detected only in USA each year. It has been determined that 70% of the foods that cause poisoning deteriorate while preparing, and 40% of this is caused by bacteria in the hands.

Tested Bacteria

Staphylococcus aureus: may be the main cause of food poisonings. It is commonly seen in animals and is transmitted to people through their hands.

Pseudomonas aeruginosa: It is commonly seen in places where water quality is low. It is found in moist environments, plants and soil. It can be seen in humid environments of hospitals. It is one of the main causes of hospital infections. It may cause urinary tract infections, wound and burn infections in children and patients with insufficient immune system.

Escherichia Coli: There is a risk of contamination from people carrying food, water and bacteria. It may cause vomiting, blood in stool, blood in the stomach and diarrhea.

Enterococcus hirae: It may cause prostate enlargement and urinary tract infections.
